About me	16
Ebook PDF Generation Tool	18
Book Cover	19
License	20
 The ls command	 21
 The cd command	 24
 The cat command	 27
 The tac command	 30
 The head command	 32
 The tail command	 34
 The pwd command	 37
 The touch Command	 39
 The cal Command	 42
 The bc command	 45

The df command	49
The help command	53
Syntax	54
Options	55
Example	56
The factor command	57
Syntax	58
Options	59
Examples	60
The uname command	61
Syntax:	62
Examples	63
Options	64
The mkdir command	65
Syntax	66
Examples	67
Options	68
The gzip command	69
Usage	70
Compress a file	71
Decompress a file	72
Compress multiple files:	73
Decompress multiple files:	74

Short Flag	Description
-b	print the time of last system boot

018-the-free-command.md

The `free` command

The `free` command in Linux/Unix is used to show memory (RAM/SWAP) information.

Usage

Show memory usage

Action: --- Output the memory usage - available and used, as well as swap

Details: --- Outputted values are not human-readable (are in bytes)

Command:

```
free
```

Show memory usage in human-readable form

Action: --- Output the memory usage - available and used, as well as swap

Details: --- Outputted values ARE human-readable (are in GB / MB)

Command:

```
free -h
```

The `top/htop` command

`top` is the default command-line utility that comes pre-installed on Linux distributions and Unix-like operating systems. It is used for displaying information about the system and its top CPU-consuming processes as well as RAM usage.

`htop` is interactive process-viewer and process-manager for Linux and Unix-like operating system based on ncurses. If you take `top` and put it on steroids, you get `htop`.

Short Flag	Long Flag	Description
-k	-	Searches the given command with RegEx in all man pages
-w	-	Returns the location of a given command man page
-I	-	Searches the command manual case sensitive

The `passwd` command

In Linux, `passwd` command changes the password of user accounts. A normal user may only change the password for their own account, but a superuser may change the password for any account. `passwd` also changes the account or associated password validity period.

Example

```
$ passwd
```

The syntax of the `passwd` command is :

```
$ passwd [options] [LOGIN]
```
