Options	68
The gzip command	69
Usage	70
Compress a file	
Decompress a file	72
Compress multiple files:	
Decompress multiple files:	74

Short Flag

Description

-b print the time of last system boot

018-the-free-command.md

The free command

The free command in Linux/Unix is used to show memory (RAM/SWAP) information.

Usage

Show memory usage

Action: --- Output the memory usage - available and used, as well as swap

Details: --- Outputted values are not human-readable (are in bytes)

Command:

free

Show memory usage in human-readable form

Action: --- Output the memory usage - available and used, as well as swap

Details: --- Outputted values ARE human-readable (are in GB / MB)

Command:

free -h

The top/htop command

top is the default command-line utility that comes pre-installed on Linux distributions and Unix-like operating systems. It is used for displaying information about the system and its top CPU-consuming processes as well as RAM usage.

htop is interactive process-viewer and process-manager for Linux and Unix-like operating system based on neurses. If you take top and put it on steroids, you get htop.

Short Flag	Long Flag	Description
-k	-	Searches the given command with RegEx in all man pages
-W	-	Returns the location of a given command man page
-I	-	Searches the command manual case sensitive

The passwd command

In Linux, passwd command changes the password of user accounts. A normal user may only change the password for their own account, but a superuser may change the password for any account. passwd also changes the account or associated password validity period.

Example

\$ passwd

The syntax of the passwd command is:

\$ passwd [options] [LOGIN]

This is a sample from "101 Linux Commands eBook" by Bobby Iliev the Hacktoberfest community.
